

Mount Royal University - Environmental Health & Safety		
<b>FM Global Hot Work Training Access</b>		
Rev: 01 DRAFT	Date: July 2023	Page: 1 of 2

## PREAMBLE

Hot work is an operation that involves open flame or that may produce heat, sparks, or other sources of ignition. Hot work operations include welding, brazing, soldering, torch or radial saw cutting, grinding, or using electrical equipment not classified for use in a hazardous location. Hot work fires and explosions can cause devastating losses to people, property, and organizations, so it's critical that the hazards be controlled.

## SCOPE

This training is required by any person who is performing hot work on behalf of Mount Royal University (MRU). Before any hot work is conducted, where alternative ways (non hot work) are not available, at the University, the contractor must review the MRU Safety Program "[Hot work Management](#)" and complete the FM Global how work training course "**Managing How Work Using FM Global's Hot Work Permit System**"

## PROCEDURE

1. Log into FM Global training Center. [fmglobal.com/training-center](https://fmglobal.com/training-center)
2. Begin Registration, fill out form using **88410** as Account Number
